SUMMARY

Dedicated and hardworking Information Technology student and aspiring software developer with strong experience in developing web-based and mobile applications focused on real-world community solutions. Skilled in system development, UI design, database management, debugging, and software implementation. Passionate about building innovative technologies involving AI, machine learning, GPS monitoring, and automated reporting systems. Committed to continuous learning and creating efficient, user-friendly digital solutions.

CAPSTONE, PROJECT EXPERIENCE A

Development and Implementation of a GPS and Selfie-Based OJT Monitoring System with Overtime Tracking and Automated Reporting (Web App)

- Developed a web-based OJT monitoring system with GPS tracking and selfie verification features.
- Implemented automated attendance logging, overtime computation, and report generation.
- Designed responsive interfaces for students, coordinators, and administrators.
- Managed backend database integration and system testing for reliability and accuracy.

FairScore: Real-Time Event Tabulation & Management System (Web-Based)

- Created a web-based event scoring and tabulation platform for real-time result computation.
- Developed modules for candidate management, score tracking, and automated ranking.
- Improved usability through clean UI design and efficient system workflows.
- Conducted testing and debugging to ensure smooth event operations.

ExpenseEasy: Tracking Your Budget (Mobile Application)

- Developed a mobile budgeting application for expense and financial tracking.

- Implemented expense categorization, budget monitoring, and financial summaries.
- Designed user-friendly mobile interfaces for improved accessibility and navigation.
- Assisted in application testing and feature enhancement.

Plant Disease Detector (Web App with Machine Learning)

- Developed a machine learning-based web application for plant disease detection.
 - Integrated image processing and classification functionalities for disease prediction.
 - Assisted in dataset preparation, testing, and improving prediction accuracy.
 - Designed accessible interfaces for agricultural users and monitoring purposes.
-

EDUCATION

Bachelor of Science in Information Technology

Buenavista Community College

- Focused on system development, programming, database management, and software engineering.
 - Active participant in academic and community-based technology projects.
-

ADDITIONAL INFORMATION

Technical Skills

- A.I powered development (claude code , gemeni)
- Web Development (HTML, CSS, JavaScript, PHP)
- Java
- Basic Python Programming
- Machine Learning Fundamentals
- Database Management (MySQL)
- FireBase
- postgreSql
- UI/UX Design

- Git & GitHub
- VS Code
- Microsoft Excel
- Antigravity

Languages

- English (Proficient)
- Filipino/Tagalog (Native)
- Cebuano/Bisaya (Conversational)

Certifications

- Introduction to Cybersecurity — Cisco Networking Academy
- SQL Server Foundation Course — ScholarHat
- Introduction to Modern AI— Cisco Networking Academy
